MEMORANDUM

TO: Daniel Evans, Section Chief

FROM: Henry Wilkie, Project manager 

SUBJECT: KEYSpan CORPORATION (current name: PSEG – Long Island)
NYD0068660008
CA400 and CA550-NR

DATE: March 30, 2016

This is reference to GPRA Milestones, CA400 and CA550-NR for the KEYSpan CORPORATION (current name: PSEG – Long Island) – Hicksville Operation Center in Hicksville, New York. The CA400 milestone signifies that the final remedy for a site has been selected, but may also be achieved where releases have not occurred or corrective action was never necessary. The CA550NR is achieved when no remedy is required.

In a meeting on September 8, 2015, PSEG - Long Island provided the Department with an RCRA SWMU Facility Characterization presentation. The report documented that there were no releases to the environment from any Solid Waste Management Units (SWMUs) or Areas of Concern (AOCs) or regulated units. To verify this assertion, the Department requested that a groundwater investigation be conducted at Hicksville Operation Center. The primary focus was to evaluate existing onsite conditions, groundwater flow direction, and water table.

On October 08, 2015 PSEG-Long Island submitted a Groundwater Investigation Work Plan. The groundwater investigation was conducted on December 2015. Based on previously information and the fact that groundwater investigation did not identify any groundwater contamination, it is appropriate to conclude that no corrective action activities are required at this time

In accordance with guidance from USEPA, it is my finding that this facility meets the definition of the RCRA info code CA400. Since there is no remedy required for this facility, the CA550 is met.
